Grease Joint Rejuvenator® Professional Model

Have You Ever Tried to Force Grease Through a Grease Fitting and Couldn't? Now You Can!

The reason why the grease does not go into the fitting is not because of the fitting; it's because the grease has dried up inside the joint or pin groove. Simply put, you cannot push new, soft grease into a joint if the old grease has become hard and dried, blocking the new grease.

The Grease Joint Rejuvenator® cleans the joint by forcing any light oil in through the fitting. Just fill the Grease Joint Rejuvenator with light oil, connect to the fitting and gently tap over and over again until the new oil has completely traveled through the old, hardened grease. Like magic, all of a sudden, you'll feel the joint open and the joint or pin can now be greased.

Features and Benefits

- Opens clogged grease joints
- Lubricates and unclogs bearings, pinned joints, kingpins, shafts, bushings, etc.
- Can be used on all farm, construction, lawn, excavating and manufacturing equipment as well as trucks, trailers, marine drive trains, milling machines, lathes and any place Zerk fittings are used
- Hardened, four-jaw-locking grease couplers
- New, stainless steel design

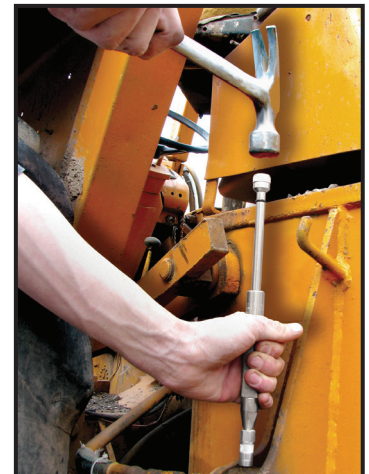

Includes

5" Flex Hose and Extra Grease Coupler

PATENTED
