GREASE JOINT REJUVENATOR® MASTER KIT

Have You Ever Tried to Force Grease Through a Grease Joint or Fitting and Couldn't? Now you Can!

The reason why the grease does not go into the fitting is not because of the fitting; it's because the grease has dried up inside of the joint or pin groove. Simply put, you cannot push new, soft grease into a joint if the old grease has become hard and dried, blocking the new grease.

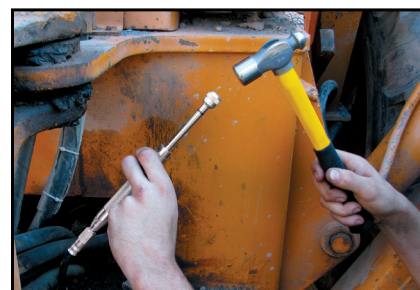

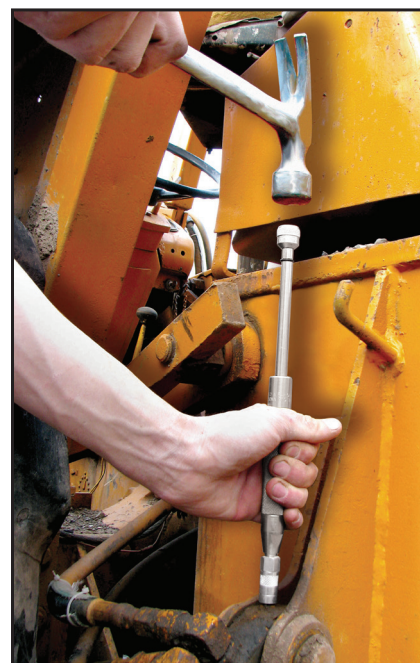

The Grease Joint Rejuvenator® cleans the joint by forcing any light oil in through the fitting. Just fill the Grease Joint Rejuvenator® with light oil, connect to the fitting and gently tap over and over again until the new oil has completely traveled through the old, hardened grease. Like magic, all of a sudden you feel the joint open and the joint or pin can now be greased.

Features and Benefits

- Opens clogged grease joints
- Lubricates and unclogs bearings, pinned joints, kingpins, shafts, bushings, etc.
- Can be used on all farm, construction, lawn, excavating and manufacturing equipment as well as trucks, trailers, marine drive trains, milling machines, lathes and any place Zerk fittings are used
- Two hardened, four-jaw-locking grease couplers

Patented

#7863 Kit Includes

- #7862 Professional Model
- #7864 Pocket Model
- #7884-7 5" Flex Hose
- #7902 Two Grease Couplers
